WHO Collaborating Centre for Diagnosis, Research, Reference and Training in Leptospirosis

पोर्ट ब्लेयर / Port Blair - 744 103

अवधि / DURATION : 19<sup>th</sup> to 23 February 2024

Ministry of Health and family welfare, Govt. of India launched a scheme through National Centre for Disease Control (NCDC) with an objective to strengthen intersectoral coordination for identifying the pivotal role of IDSP & Animal Husbandry in diagnosis and prevention & control of Zoonotic diseases. As ICMR-Regional Medical Research Centre, Port Blair is one of the regional coordinator, our Centre is organizing a 5 days “*Hands on training on laboratory diagnosis of leptospirosis, Characterization of the isolate & Identification of Animal Vectors*” which is schedule to be held from 19<sup>th</sup> to 23 February 2024

The magnitude of the problem of leptospirosis appears to be increasing and the endemic regions are widening globally . Global warming and climatic factors and frequent extreme weather events apparently are driving this trend. The knowledge on the biology of leptospira is rapidly expanding and the new insights of the pathogen’s mechanism of adaption, virulence, pathogenesis and DNA based vaccines may have the potential to be developed as solution to the emerging challenges. The hands on workshop will be a platform to strengthen the diagnosis and updating the knowledge on disease with special reference diagnosis and tracking of animal vectors and providing hands on training to technologists , researches, public health, professionals and clinicians.
